Providing Health Care Everywhere.

Whether an NCAA, intramural or club athlete, students at colleges and universities around the U.S. receive preventative, emergency and rehabilitative care from athletic trainers. In the performing arts setting, athletic trainers create specialized injury prevention and rehabilitation treatment plans, resulting in lower costs and quicker recovery time for dancers, musicians and vocalists. From firefighters and police to service members and their families, athletic trainers provide care to those in the public safety sector and armed forces. Athletic trainers in higher education instill quality professional and post-professional skills and knowledge in athletic training students. In the occupational health setting, athletic trainers keep young athletes safe through pre-participation physical exams, hydration solutions and comprehensive health care programs. In youth and recreational sports, athletic trainers keep young athletes safe through comprehensive athletic health care programs. In private and public secondary schools, athletic trainers provide health care to student athletes and are a critical link to parents, coaches, teachers and administrators. In hospitals and clinics, athletic trainers provide value through skills in triage, administration and general patient education. Elite athletes who compete in professional sports rely on the athletic trainer’s skill set to keep them active, healthy and performing at their best.
